

Ingram Micro Commerce & Fulfillment Announces Magento 2.0 Connector for Shipwire Platform

Ingram Micro Commerce & Fulfillment Solutions, a strategic business unit of Ingram Micro Inc., (NYSE: IM), today announced that it will release its new Magento 2.0 Connector for both Enterprise and Community editions at Shop.org Retail's Digital Summit 2016. The connector provides a seamless way for Magento driven e-commerce stores to sync with Ingram Micro Commerce's Shipwire Platform.

Technology Partnership

Magento 2.0 builds upon the previous open source platform with the goal of empowering brands, retailers, and businesses across B2C and B2B industries to offer omnichannel shopping experiences quicker and more cost-effectively. Enhanced performance and scalability, new features to boost conversion rates, and business agility and productivity improvements are a few of the features that can be leveraged.

New Connector

The new Shipwire Fulfillment Platform [connector](#) is accessible through the Magento Marketplace and provides retailers with ecommerce order fulfillment, shipping software and cloud-based logistics services from fulfillment centers around the world.

Powered by RESTful APIs, the connector brings together ecommerce and order fulfillment in four key ways: (1) Order entry sync, (2) Order tracking, (3) Inventory status, (4) Shipping rates.

The order entry sync enables orders to be automatically imported from a user's Magento store into the Shipwire Platform every hour.

When orders are placed and shipped, the Shipwire Platform pulls all tracking information automatically, including expected delivery dates so that the retailer and the store owner gets complete visibility into their last mile delivery.

Inventory in the Shipwire Platform is synced with a user's Magento store, allowing users to query inventory statuses globally, by region or by warehouse, and to see when inventory will be available next or if it is out of stock.

The connector allows store owners to offer multiple shipping options during checkout by leveraging the [Shipwire Platform Rates API](#), which obtains real-time shipping rates during checkout and returns various shipping service level options, including the most cost-effective rate based on warehouse, packaging and carrier variable.

About Ingram Micro Commerce & Fulfillment
