

Loss Prevention forensic analysis solutions for retail

IntelliQ is the leading provider of Forensic Analysis solution to the retail industry. With a strong global presence across multiple retail sectors, IntelliQ solutions help our clients generate rapid, substantial and sustainable ROI.

Whether securely hosted by IntelliQ or run within your own IT infrastructure, the IntelliQ solution offers the most powerful yet easy to use analysis tools for detecting and preventing invisible internal fraud, external theft and poor procedural compliance. Benefitting from over a decade of extensive customer-centric development, our forensic analysis software gives retailers complete visibility of the root causes of shrinkage and margin erosion across their entire estate.

What we deliver

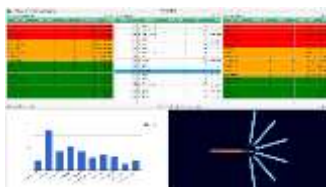

IntelliQ provides loss prevention field users with an easy to use, customisable, browser-based Dashboard view, enabling instant access to your favourite fraud reports and KPI analysis.

Pinpointing invisible fraud is easy with IntelliQ. Our intuitive fraud detection capabilities enable users to quickly filter out false positives in order to get to the root cause of the issues at hand.

IntelliQ offers holistic analysis across all retail channels, giving piece of mind for monitoring fraudulent activity in an increasingly complex trading environment.

Intuitive analytics via easy to use, drag and drop report creation allows loss prevention teams to view retail data in numerous ways - from Tabular reports and interactive Charts & Graphs, to Vortex for visual link analysis.

IntelliQ's Radar feature enables users to automatically track cashier fraud cases activity from directly within the solution.

At IntelliQ we have developed extensive real-world loss prevention experience which we apply to every solution we deploy for customers, helping to ensure you enjoy exceptional ROI from your solution - both now and well into the future.

IntelliQ offer comprehensive secure solution hosting services. This is delivered via our network of UK-based, Tier 3+ secure datacentres that are fully ISO 27001 accredited and certified as PCI compliant.

At IntelliQ, we have developed extensive experience in understanding complicated retail data and transforming it into something simple and meaningful for users. We also add value to the raw data, helping to enhance and expedite investigations.

IntelliQ allows investigators to ask any question of the data and get results in seconds. Users can move through data in any direction, to help support swift investigation into even the most sophisticated cases of fraud and theft.

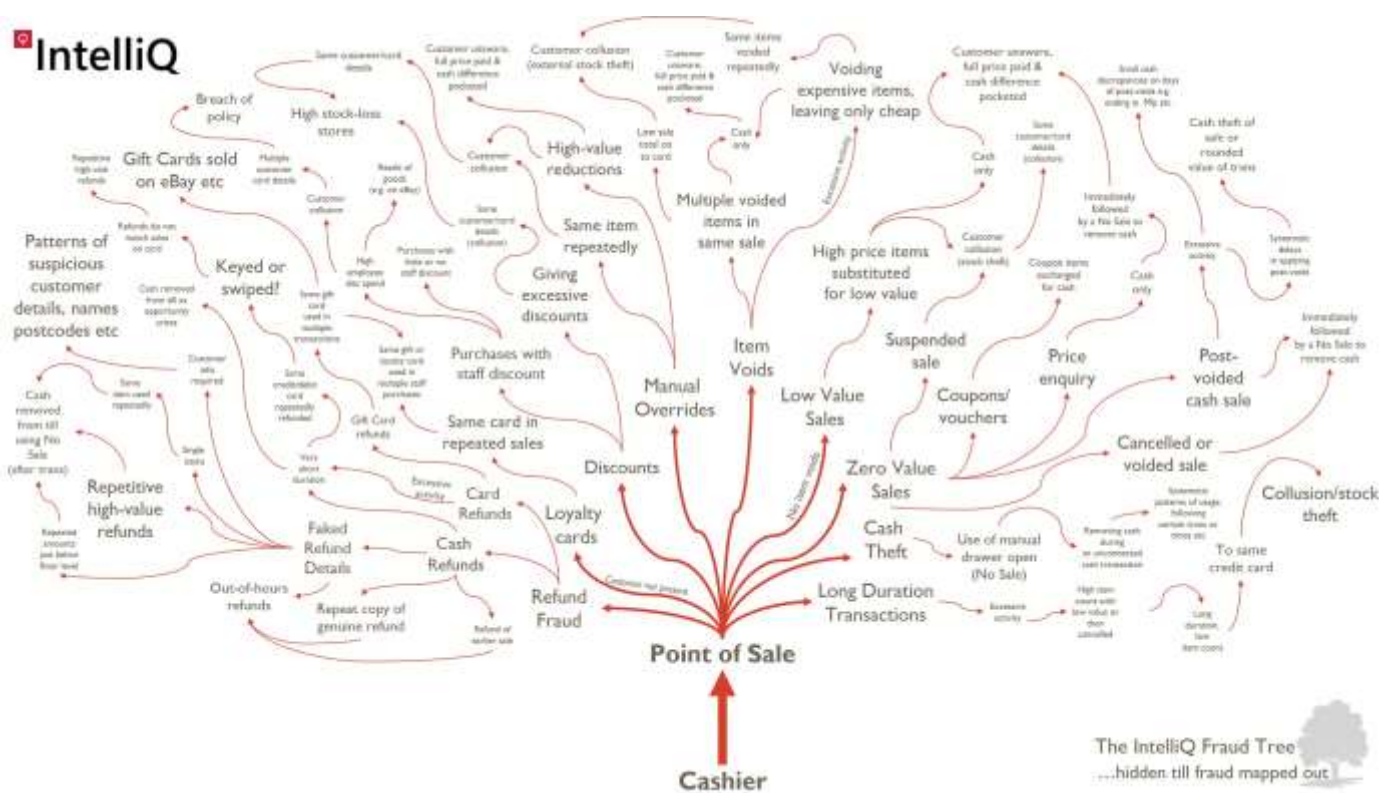

Take the FREE IntelliQ Data Challenge!

We are offering retailers our totally unique ‘Data Challenge’ – whereby we study a 3-month snapshot of your EPOS data with our solution to identify possible areas of fraudulent activity – all free of charge. The results are then relayed back to you via a Functional Workshop to demonstrate the potential return and enhanced profit protection we could provide to your retail operation with our solution.

The IntelliQ Fraud Tree

Using our loss prevention domain expertise and insights learnt from our extensive retail clients, IntelliQ has developed the ‘Fraud Tree’. This is designed to illustrate the breadth and depth of complex and often invisible fraud at the point of sale. Many of the key areas of POS activity and transaction types that are prone to internal malpractice are listed, with the various nuances of associated behaviors interlinked.

The IntelliQ loss prevention solution allows retailers of all shapes and sizes to stay ahead of fraudulent activity across all areas of business. Automated Blueprint functionality also enables investigators to receive ‘gift-wrapped cases’, with all of the relevant fraudulent transactional data included to support the investigation process. Should you decide to take part in our free Data Challenge, as standard we investigate all branches of the fraud tree that are relevant to your retail operation.
